

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS

1. (Currently Amended) A pipe structure of a windshield washer fluid feeding device comprising:

a refill pipe having a multiply-curved shape so as to define a wide space between the refill pipe and a head lamp unit of a vehicle, the refill pipe being joined at one end thereof to a windshield washer fluid reservoir tank, the refill pipe having a generally S-shape; and

an auxiliary pipe connected at both ends thereof to the refill pipe and integrally formed with the refill pipe.

2. (Previously Presented) The structure as set forth in claim 1, wherein the refill pipe includes:

a joining pipe which is joined to the windshield washer fluid reservoir tank and is extended upward in a vertical direction;

an inverse U-shaped pipe extending from the joining pipe;

a U-shaped pipe extending from the inverse U-shaped pipe; and

a vertical pipe extending upward in a vertical direction from the U-shaped pipe.

3. (Currently Amended) The structure as set forth in claim 1, wherein the auxiliary pipe communicates at the one end thereof with an uppermost portion of the an

inverse U-shaped pipe, and at the other end thereof with an upper end portion of the ~~a~~
vertical pipe.

4. (Previously Presented) The structure as set forth in claim 2, wherein the auxiliary pipe communicates at the one end thereof with an uppermost portion of the inverse U-shaped pipe, and at the other end thereof with an upper end portion of the vertical pipe.

5. (New) A pipe structure of a windshield washer fluid feeding device comprising:

a refill pipe having a multiply-curved shape so as to define a wide space between the refill pipe and a head lamp unit of a vehicle, the refill pipe being joined at one end thereof to a windshield washer fluid reservoir tank; and

an auxiliary pipe connected at both ends thereof to the refill pipe and integrally formed with the refill pipe,

wherein the refill pipe includes:

a joining pipe which is joined to the windshield washer fluid reservoir tank and is extended upward in a vertical direction;

an inverse U-shaped pipe extending from the joining pipe;

a U-shaped pipe extending from the inverse U-shaped pipe; and

a vertical pipe extending upward in a vertical direction from the U-shaped pipe.

6. (New) A pipe structure of a windshield washer fluid feeding device comprising:

a refill pipe having a multiply-curved shape so as to define a wide space between the refill pipe and a head lamp unit of a vehicle, the refill pipe being joined at one end thereof to a windshield washer fluid reservoir tank; and

an auxiliary pipe connected at both ends thereof to the refill pipe and integrally formed with the refill pipe,

wherein the auxiliary pipe communicates at the one end thereof with an uppermost portion of an inverse U-shaped pipe, and at the other end thereof with an upper end portion of a vertical pipe.
